

# SoftEquip T15

## CONSOLE EXTENSION 100 METER

With the SoftEquip Console Extension 100 meters it is possible to separate the Sepura radio unit and the control console by a distance of up to 100 meters.

Radio with console extension box is mounted on a 19" rack shelf, and on the console side there is a corresponding box that is connected to the console. The boxes are linked together with 2 Cat 5 or Cat 7 cables. The radio is placed in a separate room and thus provides an interference-free operator position.

The distance between the radio unit and the control console does not prevent Sepura standard accessories from being connected to the control console such as microphone, speaker, handset, PTT, etc.

On the console side you can for example use Desktop Station Console with SCC3, see system sketch.

### FEATURES & BENEFITS

- Delivered fully assembled on a 19" rack shelf
- The radio can be installed in a technical room/equipment room with access to UPS, antenna connections, etc.
- No configuration
- Plug & play
- Radio unit and console can be separated up to 100m

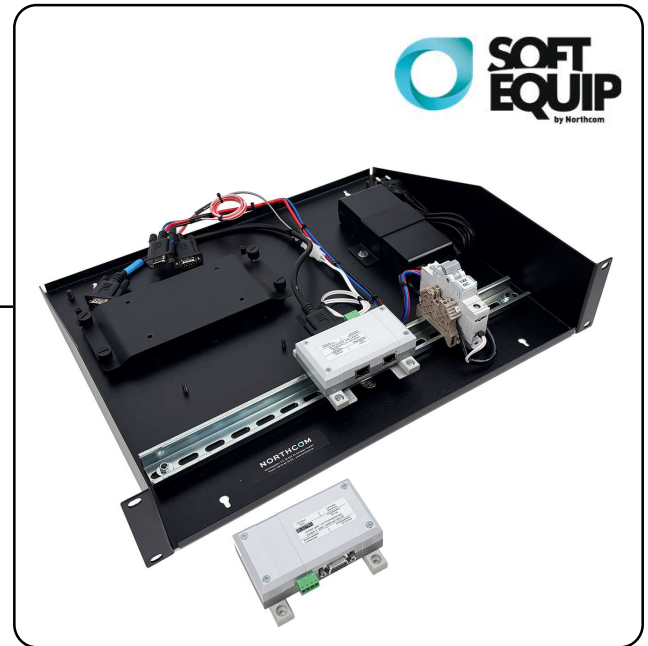

### OPTIONAL

64340	Desktop Station Console with SCC3, Aluminium
64359	Connection Cable 0.5m 15pol SubD-HD (M to F) [other lengths available]
300-01808	Sepura SCC3 Colour Console
300-00067	Sepura Remote Console Cable 0.5m [other lengths available]

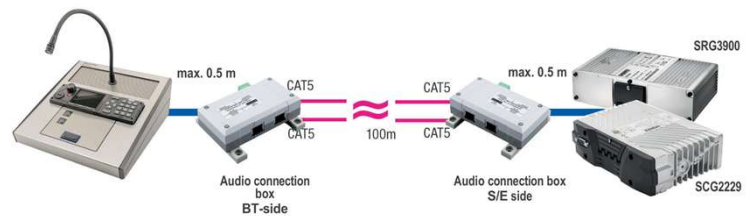

### SPECIFICATION

19" rack shelf, 2RU (approx. 88mm), containing:  
Power Supply Unit, 230 VAC
