

ProEquip Mic Splitter

MICROPHONE SPLITTER FOR ICOM GM600

A ProEquip microphone splitter to be used to connect two microphones to a radio.

The output sound is only recorded from the microphone whose PTT is pressed. You can only transmit with one microphone at a time.

A good and simple solution when there is a need to be able to use two microphones for one radio, for example in the case of double operating positions.

FEATURES & BENEFITS

- Robust and easy to install
- No additional software needed, just "plug and play"
- Good and cheap solution when you need to be able to use one radio from two different operating positions

OPTIONAL

10173 Icom HM-214V Microphone
